They give us knowledge regarding to the industry but our curriculum is designed in such a way that it lacks industrial standards. Curriculum needs improvement. The teaching-learning process is a dynamic interaction between educators and learners. I am glad to say that the course content made it easy to understand. Your real life examples helped clarify the application of the theory. The use of multimedia in your presentation kept the class engaged and added visual clarity to the subject matter. The regular quizzes you provide help us self-assess our understanding and stay on track with the material. The teaching-learning process is very cooperative and also encourages for extra curricular activities. Delivers the lecture in such a way that students not only get familiar with concepts but also understand them rather than cramming. Learning process is very good because of our teachers is well qualified and supportive. The teachers were great they tried to cover the whole syllabus. Satisfactory. More practical works and less assignments should be there. Pending and Backlog results. Good.
